

# DOMINO/DEVICE+ CATALOG

OneLab 1.20

Waters™

The pace of innovation in current day biological research demands the highest levels of reproducibility and traceability.

Waters Automation has developed an intelligent cloud-based software environment called **OneLab** within which experiments can be intuitively designed, repeatably executed, and tracked through a rapidly evolving ecosystem of connected devices, Dominos and accessories.

With the constant addition of new capabilities, accessories and consumables in OneLab, this regularly updated catalog provides a complete list of all of the consumables that have been made compatible with our Dominos and Devices.

**Dominos** are machine-readable consumable holders that create the interface between a variety of different consumable types and the Andrew+ pipetting robot to enable seamless automation of many different laboratory workflows.

Equipped with QR codes housing critical consumable information and ARUCO codes for spatial positioning, Dominos are an indispensable part of any Andrew+ automation configuration.

**Device+** units are active devices that elevate both manual and fully automated workflows on the Andrew+ instrument by adding specific functionality while being fully connected to OneLab through WiFi or Ethernet. Just like Dominos, they are equipped with QR codes housing critical consumable information and ARUCO codes for spatial positioning. Use **Device+** units to add the following functionality to your OneLab methods: Shaking, Flow-Through Extractions, Magnetic Bead Separations, Heat-Shaking and Heating/Cooling.

Use the following symbols on each consumable page to identify their compatibility with Waters Connected Pipettes when used with the Andrew+ robot

Compatible

Incompatible

« on-the-fly » :  
Only on-the-fly dispensing is possible

**1 500**

Numeric value :  
The minimal volume in  $\mu\text{L}$  that the consumable must contain to allow the use of the pipette in OneLab

Any consumable with the Microplate Gripper Compatibility icon can be moved between compatible positions by the Andrew+ robot

Want to buy a Domino, Device+ or Waters Consumable? Use the active links throughout this catalog to go to their page on our e-shop

## TIP INSERTION SYSTEM DOMINO

The Tip Insertion System Domino is a versatile system capable of holding a removable rack of 96x Sartorius OptiFit tips for volumes ranging from 0.2µL-1200µL in both filtered and non-filtered formats. Its force-dispensing design enables even tip insertion across all channels of 8-channel pipettes. All OptiFit tip trays are color-coded for easy matching with a corresponding, color-coded Waters Connected Pipette.

[SEE THIS DOMINO  
ON OUR E-SHOP](#)

**Manufacturer:**  
Sartorius

**Part number:**  
Variable

### 1-channel pipettes

●	●	●	●	●	●
10µL	120µL	300µL	1000µL	5mL	10mL

## IMPORTANT

When setting up the TempAssure® 0.2 mL 8-tube strip(s) in Vari-Plate™ 96x frame into the 96-PCR Plate Domino, it is recommended to first place the empty frame in the Domino, ensuring it is firmly inserted into the support.

Then, the TempAssure® 0.2 mL 8-tube strip(s) can be individually loaded into any of the 12x column slots of the frame as required and in a clean way (using gloves), making sure they are properly inserted.

## PCR CARTRIDGE DOMINO

The PCR Cartridge Domino is designed to securely hold a specific PCR-type plate in place during automated pipetting steps where tips will get «stuck» inside the consumable due to the design of the plate. This Domino design ensures that the plate doesn't move during the pipetting steps and can't get inadvertently picked up by the Andrew+ instrument after pipetting. Note: the «dispense from the bottom» option must be selected in OneLab when working with this consumable.

## TILTED MICROPLATE DOMINO

The Tilted Microplate Domino is designed to hold a growing array of microplates. It's lightly tilted design holds microplates in place at a small descending angle from back to front (short edge), thus minimizing dead-volumes. The Andrew+ robot detects the use of this Domino and adapts dispensing and aspirating steps accordingly, specifically choosing to dispense towards the top of the wells and aspirating from their bottom corner for optimal volume recovery.

## MICROPLATE SHAKER+

EQUIPPED WITH Ø12MM VIAL COLLECTION RACK

Ordering product number

**186010531**

Ø12mm Vial Collection Rack

OneLab reference: [519.2601]

### IMPORTANT

The Ø12mm Vial Collection Rack (24-position rack) is manufactured by Waters Corporation and specifically designed for use with the **Extraction+** connected device.

The Ø12mm Vial Collection Rack is sold separately from the Microplate Shaker+. A Collection Labware Rack Domino is only required for this rack when an automated movement to/from the Shaker+ (using the plate gripper tool) is required.

## TUBE SHAKER+ W/40ML TUBE ADAPTOR

The Tube Shaker+ is a OneLab connected device that uses market-leading orbital shaking technology to ensure vibration-free mixing speeds up to 2000rpm. Each Tube Shaker+ device is specifically designed to host dedicated tube types for maximum mixing efficiency.

## 96-PCR MAGNET+

The 96-PCR Magnet+ is a OneLab connected device that provides a simple and reliable way of fully automating the purification of genomic, plasmid and mitochondrial DNA using magnetic beads in small-volume plates. An automated moving shelf strategically positions magnets close to the bottom sides of consumables to optimize bead pelleting. The Andrew+ robot automatically and intelligently positions pipettes during pipetting steps with the Magnet+ so as to optimize purification workflows by not only avoiding the disturbance of pellets during pelleting phases, but also ensuring vigorous resuspension when necessary.

## DEEPWELL MAGNET+

The Deepwell Magnet+ is a OneLab connected device that provides a simple and reliable way of fully automating the purification of genomic, plasmid and mitochondrial DNA using magnetic beads in deepwell plates. An automated moving shelf strategically positions magnets close to the bottom sides of consumables to optimize bead pelleting. In parallel, the Andrew+ robot automatically and intelligently positions pipettes during pipetting steps with the Magnet+ so as to optimize purification workflows by not only avoiding the disturbance of pellets during pelleting phases, but also ensuring vigorous resuspension when necessary.

## 50ML TUBE MAGNET+

The 50mL Tube Magnet+ is a OneLab connected device that provides a simple and reliable way of fully automating the purification of genomic, plasmid and mitochondrial DNA using magnetic beads in mid-size tubes. An automated moving shelf automatically and strategically moves magnets across a wide surface of the tubes found within the device in order to optimize bead pelleting performance. In parallel, the Andrew+ robot automatically and intelligently positions pipettes during pipetting steps with the Magnet+ so as to optimize purification workflows by not only avoiding the disturbance of pellets during pelleting phases, but also ensuring vigorous resuspension when necessary.

## HEATER-SHAKER+

The Heater-Shaker+ device provides high-speed mixing & temperature control for the most demanding applications. This uniquely designed compact device is suitable for a wide range of labware thanks to its interchangeable adaptors. It combines both heating (from ambient to 99 °C) and vibration-free shaking (from 200 up to 2,500 rpm). Maximum recommended shaking speeds depend on the adaptor that the device is equipped with.

## EXTRACTION+

The Extraction+ system comprises the manifold with the collar lifter and the connected vacuum pump.

### EXTRACTION+ SYSTEM W/ MICROPLATE GRIPPER

[SEE THIS DEVICE  
ON OUR E-SHOP](#)

Ordering part number : 176005201

### EXTRACTION+ SYSTEM W/O MICROPLATE GRIPPER

[SEE THIS DEVICE  
ON OUR E-SHOP](#)

Ordering part number : 176005202

### DIRECT COMPATIBILITY

No adaptors are required for the following Extraction labware to be compatible with the Extraction+ Device

### IMPORTANT

Multiple different formats of consumables are compatible with the Extraction+ Device. Look out for the following format symbols and ensure that they match between your extraction and collection labware before making a selection. The 1x format is compatible with all extraction labware formats, but only for waste collection and not as a sample collection option.

### DIRECT COMPATIBILITY

No adaptors are required for the following Waste and Collection labware to be compatible with the Extraction+ Device itself. Depending on the workflow requirements, they can either be directly placed inside the manifold at the start of a run or on a compatible Domino within the Andrew+ workbench.

### IMPORTANT

For fully automated Extraction+ workflows involving waste and collection labware movements, ensure that you are equipped with both the Andrew+ Microplate Gripper Tool and a Domino compatible with the desired waste and/or collection labware on the Andrew+ workbench.

Gripper compatibility is confirmed with the following symbol :

We'll let you know which Domino(s) you'll need to enable fully automated extraction workflows with the consumable(s) of your choice :

For seamless compatibility and full automation with your preferred waste and/or collection labware in plate formats, we highly recommend acquiring the Extraction+ Plate Kit

## WASTE & COLLECTION LABWARE

### COMPATIBILITY VIA 5ML TUBE COLLECTION RACK - 12X

Ordering product number

**186010534**

5mL Tube Collection Rack  
OneLab reference: [519.2651]

### IMPORTANT

For fully automated Extraction+ workflows involving the movements of collection labware via the 5mL Tube Collection Rack, ensure that you are equipped with both the Andrew+ Microplate Gripper Tool and the Collection Labware Rack Domino.

The 5mL Tube Collection Rack is a 12x (3x4) format Collection Rack. As of such, it is only compatible with 12x Extraction labware. Look out for the 12x compatibility symbol when selecting your Extraction Labware.
